# Data Review:
Content Synchronization
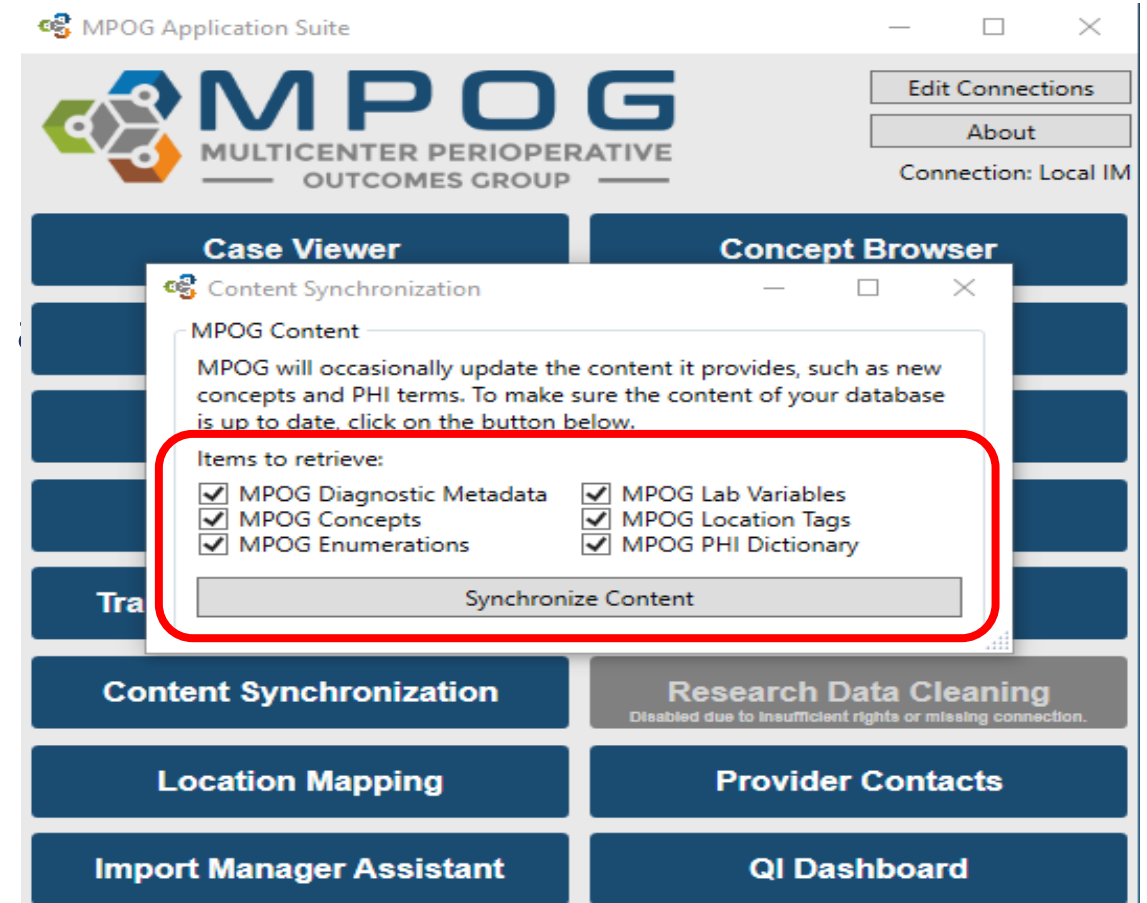

Content Synchronization Overview

- Allows you to synchronize or apply changes to content such as new concepts and PHI terminology within your local database.

- MPOG recommends performing 'Content Synchronization' on a monthly basis.

- You may also be advised by the Coordinating Center to perform 'Content Synchronization' to pull over specific content to continue mapping new variables or update diagnostics.

- When 'Content Synchronization' is required outside of the monthly recommendation, you will see a red bubble with a number on the Content Sync app.

Accessing Content Synchronization

- This window will open in 'Content Synchronization.' Using the default settings as seen below, select 'Synchronize Content.'

- Once you have selected 'Synchronize Content,' retrieving content will begin and systematic downloading of new content will occur.

- Once the content retrieval process has completed, you will notice a 'finished' comment in the 'Retrieving Content' window, indicating 'Content Synchronization' was successful.

Retrieving Content

Please wait until this process completes.

Concepts	Finished!
Lab Variables	Finished
PHI Dictionary	Finished
Enumerations	Finished
Diagnostics	Finished
