ok

**Recommendation for BP 03**

	<b>Dr. Maheshwari</b>
Keep as is: no changes at all	<input checked="" type="checkbox"/>
Modify: changes to measure specifications (see below)	<input type="checkbox"/>
Retire: eliminate entirely from dashboard and emails	<input type="checkbox"/>

**Summary of recommended modifications (if applicable)**

There is some concern that high-risk patients will have worse outcomes, and hypotension is the mediator. Thus some sort of risk adjustment will be required. Maybe only age ( carried a lot of information about comorbidities) and the surgical procedure ( surgical risk). But that will make the metric complicated and we need

to consider the risk and benefits of risk adjustment.

Also, the cumulative time is 15 minutes or lower seems to be ok.
