

Getting Started: Variable Mapping Utility

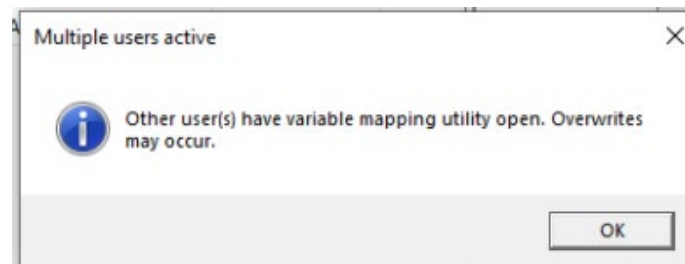

Variable Mapping

- The Variable Mapping utility provides sites the ability to map electronic health record (EHR) variables to standardized MPOG concepts.
- This process of standardizing terms across multiple EHRs and across multiple sites allows for common data elements to be used for research or quality improvement purposes.

Variable Mapping

- Once a variable is mapped, source data from the local EHR will always map to the corresponding MPOG concept automatically unless mapping is modified.
- The MPOG Variable Mapping utility simplifies the mapping process by allowing MPOG clinical reviewers to select data variables (source concepts) and match them to corresponding MPOG concepts
- MPOG recommends that only one person at a time be in the Variable Mapping app making updates. The app will check every 5 minutes to assess if other user(s) have Variable Mapping open. The following notification will appear if other users are found:

Variable Mapping

- **Important Note:** Institutional data needs to be pulled into the MPOG database before mapping can begin.
- Typically, sites begin mapping with a small amount of data (one day to one week) and then load more data after mapping is started.
- Usually, sites will automate the process of applying mappings after one month of data is loaded and mapped in the database.
- Automatic updates are typically scheduled to occur each night.
- Once a variable is mapped, it will automatically be mapped to that concept when additional information is imported.

Using the Variable Mapper

- Open the MPOG Suite and select “Variable Mapping”

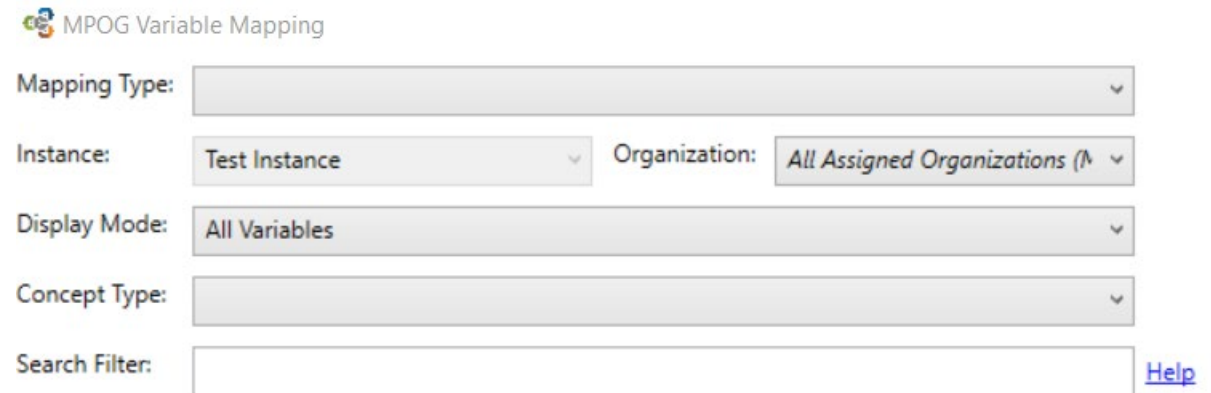

- The 'Variable Mapping' utility should open and look similar to the image below. The left side of the utility will list your institution (AIMS) variables and the right side will list MPOG concepts available to map to.
- You will also notice six fields within the MPOG Variable Mapping application that allow you to filter by category. These include Mapping Type, Instance, Organization, Display Mode, Concept Type, and Search Filter.

The screenshot shows the 'MPOG Variable Mapping' application window. On the left, under the heading 'AIMS Variables', there is a table with columns: ID, Org, Name, Times Used, Mapped As, MPOG ID, and Type. The table is currently empty. Above this table are several filter fields: 'Mapping Type' (dropdown), 'Instance' (dropdown with 'MPOG_MAS' selected), 'Organization' (dropdown with 'University of Michigan Ann A' selected), 'Display Mode' (dropdown with 'All Variables' selected), 'Concept Type' (dropdown), and 'Search Filter' (text input with a 'Help' link). On the right, under the heading 'MPOG Concepts', there is a table with columns: Name, ID, and Type. This table is also empty. Above it are 'Import' and 'Export' buttons, and 'Options' for 'Auto Search On' and 'Auto Select On'. Below the 'MPOG Concepts' table are buttons for 'Map', 'Unmap', 'Exclude', 'Skip', 'Premappings', 'Mapping History', and 'Examine'.

Variable Mapping Fields

- **Mapping Type:** This is a general mapping category that can be further filtered to subcategories
- **Instance:** This field will be populated with your default database instance (for sites that have more than one IM database).
- **Organization:** This field will be populated with your institutional name.
- **Display Mode:** This feature allows you to filter by 'All Variables,' 'Unmapped Variables,' 'Mapped Variables,' 'Pre-Mapped Variables,' 'Excluded Variables,' or 'Skipped Variables.'

The screenshot shows the 'MPOG Variable Mapping' interface. It features several dropdown menus and a search filter. The 'Mapping Type' dropdown is currently empty. The 'Instance' dropdown is set to 'Test Instance'. The 'Organization' dropdown is set to 'All Assigned Organizations (Merged)'. The 'Display Mode' dropdown is set to 'All Variables'. The 'Concept Type' dropdown is empty. The 'Search Filter' is an empty text input field. A 'Help' link is visible to the right of the search filter.

**There may be additional sites in the dropdown menu for multi-site institutions in which you are assigned (i.e., Henry Ford Detroit, Henry Ford West Bloomfield). For institutions with multiple sites, It is recommended that mapping is completed under All Assigned Organizations (Merged).*

Variable Mapping Fields

- **Concept Type:** This function allows you to sort the variables that have been mapped to an MPOG concept by concept type: Physiologic Observations, Preoperative Observations, Outcome Observations, and Intraoperative Events, Interventions, and Observations
 - Default setting is 'All' concept types. When looking at unmapped, skipped, or excluded variables, the concept type should be set to 'All' in order to see the variables.
- **Search Filter:** This function allows you to search for a specific AIMS variable.
 - Can search by original variable ID using prefix "ID" (example "ID:1448")
 - Can search by the concept ID/name fields by using prefix "mapped:" (example "mapped:propofol")

The screenshot shows the 'MPOG Variable Mapping' interface. It includes several dropdown menus and a search filter. The 'Mapping Type' is set to 'Observation Detail Type (Event Details)'. The 'Instance' is set to 'Test Instance' and the 'Organization' is set to 'All Assigned Organizations'. The 'Display Mode' is set to 'All Variables'. The 'Concept Type' dropdown is open, showing a list of options: 'All', 'Physiologic Observations' (which is highlighted in blue), 'Preoperative Observations', 'Outcome Observations', and 'Intraoperative Events, Interventions, and Observations'. There is also an 'ID' input field at the bottom left of the dropdown menu.

- To utilize the category filter option, click on the 'Mapping Type' field. A dropdown menu will appear, and you may select from the various options
- Select from the desired category from the 'Mapping Type' dropdown menu, as shown below

The screenshot displays the 'MPOG Variable Mapping' application window. The 'Mapping Type' dropdown menu is open, showing a list of categories including 'Administration Route', 'Administration Type (Inputs/Outputs/Meds)', 'Admission Type', 'Ethnicity', 'Gender', 'Lab Type', 'Observation Detail Type (Event Details)', 'Observation Type (Events/Physiologic/Outcomes)', 'Procedure Service', 'Race', 'Staff Type', and 'Units of Measurement (Administration)'. The 'Administration Route' option is currently selected. To the right of the dropdown, there are buttons for 'Import' and 'Export'. Below these, there are two buttons labeled 'Auto Search On' and 'Auto Select On'. A 'Search Filter' input field is located below the buttons. On the left side of the main window, there are labels for 'ID' and 'Type'. On the right side, there are buttons for 'Map', 'Unmap', 'Exclude', and 'Skip'. At the bottom right, there are buttons for 'Premappings', 'Mapping History', and 'Examine'. The main area of the window is a large table with columns for 'Name', 'ID', and 'Type'.

- In the example below, we have selected the Mapping Type 'Race.'

 MPOG Variable Mapping

Mapping Type: Race

Instance: MPOG_MAS Organization: University of Michigan Ann Arbor

Display Mode: All Variables

Concept Type:

Search Filter: [Help](#)

- Once 'Race' has been selected from the dropdown menu, you will notice a variety of race related variables populate the window below. You may notice variables on the left side of the screen already appear green (mapped) if premapping has been completed.

- Click the 'Race' variable you wish to map. Once the row has been selected, it will turn blue and a corresponding auto-searched MPOG concept will appear in the 'Description' field on the right side. If several options appear, you can click on one of the bold terms above the MPOG concept window to narrow the search. If the desired concept does not appear, use the search filter on the right side to modify your search.
- In this example, we have selected 'American Indian/Alaska Native.'

Mapping Multiple Variables

- You may have multiple variables that you wish to map to the same concept.
 - You can either click on the variable on the left side and drag to highlight multiple rows or hold down ctrl and click on the variables to multi-select
- Then select the concept you wish to map the variables to and click 'Map'
- You can also do this for multiple variables that you wish to Exclude, Skip, or Unmap

The screenshot displays the MPOG Variable Mapping tool. At the top, there are dropdown menus for 'Mapping Type' (set to 'Administration Type (Inputs/Outputs/Meas)'), 'Instance' (set to 'MPOG_MAS'), and 'Organization' (set to 'University of Michigan Ann Arbor'). A 'Search Filter' box contains the text 'acetaminophen'. Below these is a table with columns: ID, Org, Name, Times Used, Mapped As, and Type. The table lists various acetaminophen formulations from the University of Michigan Ann Arbor, such as 'acetaminophen 500 mg tablet' and 'acetaminophen 100 mg/5 mL oral liquid'. To the right of the table is a sidebar with 'Options' (a blue button), a 'Search Filter' box with 'acetaminophen 500', and a list of mapped concepts including 'HYDROCODONE / A', 'PROPXYPHENE W', 'OXYCODONE / ACE', 'HYDROCODONE / J', 'CODEINE / ACETAM', 'CODEINE / ACETAM', 'OXYCODONE / ACE', 'HYDROCODONE S', 'HYDROCODONE T', 'ACETAMINOPHEN', 'ACETAMINOPHEN', 'ASPRIN/ACETAMIN', and 'ACETAMINOPHEN'. At the bottom of the sidebar are buttons for 'Map', 'Unmap', 'Exclude', and 'Skip'.

Groups to Map First

- Race
- Gender
- Ethnicity
- Procedure Service
- Admission Type
- Staff Type

Groups to Map Next

- *Lab Type*

- 1st--Map labs that are important to surgical/anesthesia care (Hgb, Hct, Creatinine, Glucose, Troponin, potassium)
- 2nd--map microbiology and virology labs that we have concepts for (i.e. coronavirus, COVID Antibody testing, blood cultures, wound cultures, etc.)
- 3rd--map remaining labs that we have concepts for (i.e. WBC, blood gases) . If we do not have a concept for a variable, it is okay to leave it unmapped or skipped.

- *Administration Type (Inputs/Outputs/Meds)*

- This category includes IN's and OUT's such as fluids, medications, blood products, EBL and urine output.
- **Exclude “volume (mL)” medication variables.**

****Exclude all physiologic and gas flow variables from this mapping group**

Groups to Map Last

- *Administration Route*
 - **Do Not Exclude** in this category – map unspecified concepts to “Other” or leave unmapped
- *Units of Measurement (Administration)*
 - **Do not Exclude** in this category – leave those variables without a corresponding MPOG concept unmapped
- *Observation Detail Type (Event Details)*
 - These are observation Details. Map Observation Type first.
- *Observation Type (Events/Physiologic/Outcomes)*

Examine

Mapping History

- This function will pull the mapping logs to show which user completed each mapping and when that mapping was completed. It will be exported to your computer as an Excel file.

Epic Sites Only: Pre-Mapped Variables

- Epic sites use similar AIMS IDs (variable IDs), which can be mapped to the same concept.
- Once per year, MPOG will review the common Epic AIMS IDs and update the pre-mapping for these variables.
- **New sites:** Pre-mapping is applied before the site begins variable mapping.
- **Existing sites:** Can review the latest update to pre-mappings and adopt as appropriate for their site
 - Click on the 'Pre-mappings' button at the bottom middle of the Variable Mapping tool to either accept or reject recommended mappings.
 - Choose the 'Pre-Mappings Only' Display Mode to review those variables that have already been pre-mapped

Auto Search

- While auto search is ON, the variable name that is selected on the left-hand side will auto populate in the search filter on the right side. Clicking the auto search button will turn this function OFF and will not auto populate the search filter.

The screenshot displays the MPOG Variable Mapping application window. On the left, there are configuration options: Mapping Type (Observation Type (Events/Physiologic/Outcomes)), Instance (Test Instance), Organization (All Assigned Organizations), Display Mode (Unmapped Variables Only), and a Search Filter field. Below these is a table of mapped variables with columns: ID, Org, Name, Times Used, Mapped As, and Type. The table lists various physiological monitors and their mappings. On the right, there are 'Import' and 'Export' buttons, and an 'Options' section with 'Auto Search On' (highlighted with a red box) and 'Auto Select On' buttons. Below the options is another 'Search Filter' field. At the bottom right, there is a 'Map' button and a table of unmapped variables with columns: Name, ID, and Type. The 'Map' button is also highlighted with a red box.

ID	Org	Name	Times Used	Mapped As	Type
201408	Multiple	Monitor Oxygen Insp	36,511	Unknown Concept	Meta
201405	Multiple	Monitor Nitrous Insp	36,379	Unknown Concept	Meta

Pulse Pressure Variation	3016	Physiologic
Regional Oxygen Saturation	3017	Physiologic

Auto Select

- After mapping a variable on the left-hand side, having auto select ON will automatically jump to the next variable. To turn this function OFF, click the “auto select” button.

The screenshot displays the MPOG Variable Mapping application. On the left, there are configuration fields for Mapping Type (set to 'Observation Type (Events/Physiologic/Outcomes)'), Instance (set to 'Test Instance'), Organization (set to 'All Assigned Organizations'), Display Mode (set to 'Unmapped Variables Only'), and a Search Filter. Below these is a table of unmapped variables with columns: ID, Org, Name, Times Used, Mapped As, and Type. The table lists various medical variables like 'Monitor (Oxygen Insp)', 'Monitor (Nitrous Insp)', 'Vent (Flows O2)', etc. On the right, there are 'Import' and 'Export' buttons, and an 'Options' section. In the 'Options' section, the 'Auto Select On' button is highlighted with a red rectangle. Below the options is another search filter and a table of mapped variables with columns: Name, ID, and Type. The mapped variables table includes items like 'Unmapped Physiologic Conc', 'Perfusion- Cardiopulmonary', etc.

Export

- You can export all variables and their mappings to an Excel spreadsheet through the export button

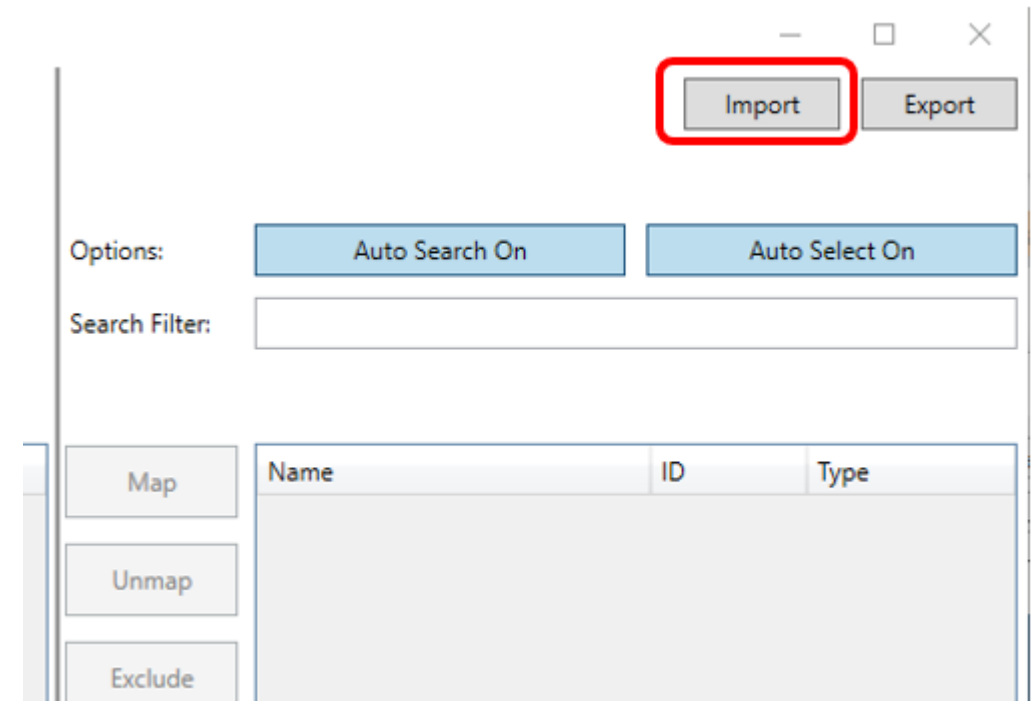

The screenshot displays the MPOG Variable Mapping application interface. On the left, there are filters for Mapping Type (set to 'Observation Type (Events/Physiologic/Outcomes)'), Instance (set to 'Test Instance'), Organization (set to 'All Assigned Organizations (1)'), and Display Mode (set to 'Unmapped Variables Only'). Below these is a search filter field. The main table lists variables with columns: ID, Org, Name, Times Used, Mapped As, and Type. The table contains 20 rows of data, mostly showing 'Unknown Concept' mappings. On the right, there are 'Import' and 'Export' buttons, with the 'Export' button highlighted by a red rectangle. Below the buttons are 'Options' for 'Auto Search On' and 'Auto Select On', and another search filter field. A sidebar on the right contains buttons for 'Map', 'Unmap', 'Exclude', 'Skip', 'Premappings', 'Mapping History', and 'Examine'. The main table on the right shows a list of unmapped physiologic concepts with columns: Name, ID, and Type.

Import

- At times, MPOG may ask you to export and send your variable mapping spreadsheet for mapping review/updates.
- MPOG can make the mapping updates on your spreadsheet and send it back to you
- In order for the updates to be complete, you'll need to save it to your computer or shared location, open Variable Mapping from the MPOG App Suite, and click on 'Import' in the top right corner. Select this file and then review and accept (or reject) the mapping changes.
 - Choose the 'Recommended' setting the next time that you transfer to update your data at MPOG Central (see 'Monthly Upload – Transfer to MPOG Central')

How Mapping Translates to MPOG Case Viewer

The **‘type’** of MPOG concept you map to an AIMS variable will determine where the data within that variable will display in Case Viewer.

- Those mapped to *‘Physiologic’* and *‘Intraop Note’* type concepts will populate in the **Chart** section of case viewer
- Those mapped to *‘Preop’* type concepts will populate in the **H&P** section of case viewer
- Those mapped to *‘Outcomes’* type concepts will populate in the **Outcomes** section of case viewer

Name	ID	Type
BP Combined Invasive Unspecified Site 3	3706	Physiologic

Unmapped Intraoperative Note Concept	50000	Intraop Notes
AACD Time Room Ready Date/Time	50001	Intraop Notes
AACD Anesthesia Start Date/Time	50002	Intraop Notes
Respiratory - Oral steroids required	71230	Preop
Respiratory - Prior intubation for pulmonary	71235	Preop
Respiratory - Most recent exacerbation (Date	71240	Preop
Unmapped Outcome Concept	90000	Outcomes
Intraoperative observed quality assurance evi	90001	Outcomes
Postoperative visit patient pain score	90002	Outcomes

Tips for Mapping Success

- Focus on mapping variables with high row counts ('Times Used').
- Once you have mapped the majority of high row count variables, you can begin to focus your attention to mapping the lower row count variables that may be relevant for anesthesia research or quality purposes.
