DataDirect User Guide

DataDirect is an application that allows users to create queries using data that has been submitted to MPOG for quality improvement and research purposes. It contains multiple filters that can help easily identify a cohort of patients. For example: Before a researcher begins work on a proposal, they can use DataDirect to identify patient, case, and institution counts for the cohort they are interested in studying. For QI purposes, providers can generate a count of how many patients received reversal for neuromuscular blockade during a specific timeframe and compare that to institution reintubation rates to identify if any correlation exists.

Gaining DataDirect Access

DataDirect contains a limited dataset: Protected Health Information is excluded except for date of service. However, because DataDirect may contain information regarding hospital level quality indicators (i.e. hospital mortality), we ask that approval from the appropriate hospital department (i.e. Quality or Health Information Management) is obtained. In order to obtain access to DataDirect, an authorization form must be completed and sent to the MPOG coordinating center. This form can be found on our website <https://mpog.org/> under the “Join” tab in the top right corner.

Next click “Downloads” from the menu on the left side:

To download the form click “MPOG DataDirect Security Checklist and Authorization Form” located under Research at the top

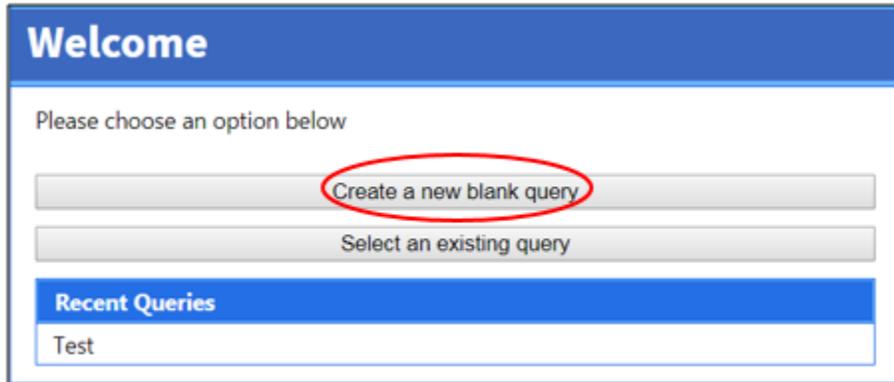

Please scan and email the completed form to Chris Ladd (laddchri@med.umich.edu) or Meridith Bailey (meridith@med.umich.edu). You will be contacted once login permissions have been updated.

Generating a Query

When creating a query, there are two modes you can choose from. **Cohort Mode** allows you to view case counts across all MPOG sites while **Data Download mode** allows you to only download cases from your site. Although DataDirect will display final case counts, institution's will remain unidentified. The following guide walks through the filters available and steps needed to create a query.

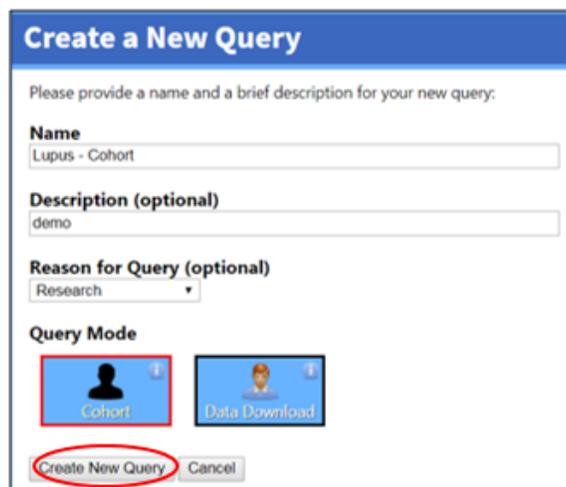

Cohort Query Mode

Upon logging in, select **Create a new blank query** to proceed. To use a previously created query, click **Select an existing query**. In cohort mode, you are able to view case counts across all MPOG sites.

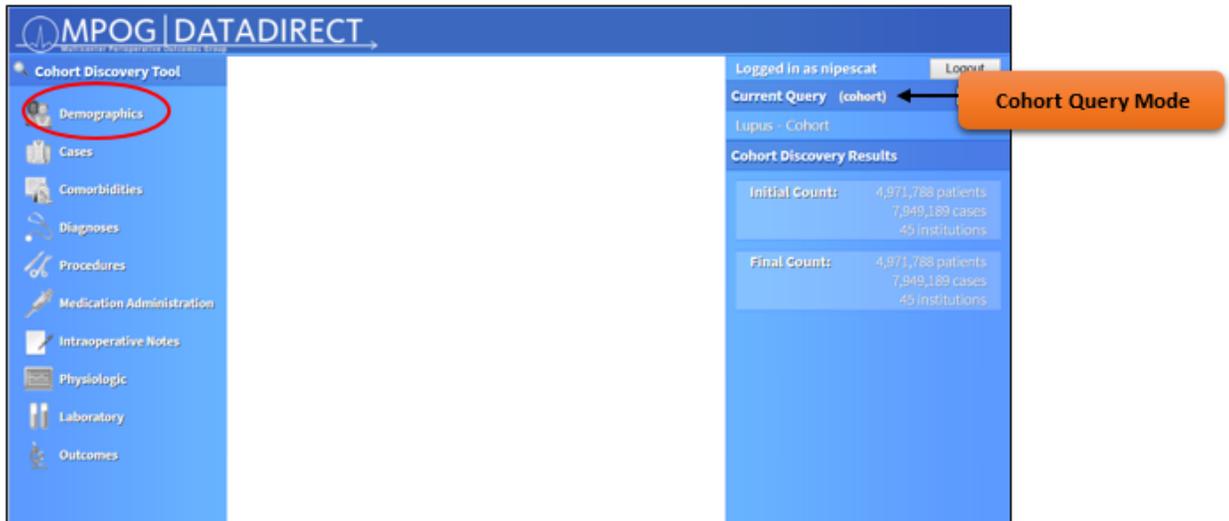

The screenshot shows a 'Welcome' page with a blue header. Below the header, it says 'Please choose an option below'. There are two buttons: 'Create a new blank query' (circled in red) and 'Select an existing query'. Below these buttons is a section titled 'Recent Queries' with a blue header, containing a single entry 'Test'.

Enter a name, description, and reason for your query. Select **Cohort** under Query Mode and then click **Create New Query**.

The screenshot shows the 'Create a New Query' form. It has a blue header. Below the header, it says 'Please provide a name and a brief description for your new query:'. There are three text input fields: 'Name' (containing 'Lupus - Cohort'), 'Description (optional)' (containing 'demo'), and 'Reason for Query (optional)' (containing 'Research'). Below these fields is a 'Query Mode' section with two buttons: 'Cohort' (circled in red) and 'Data Download'. At the bottom of the form are two buttons: 'Create New Query' (circled in red) and 'Cancel'.

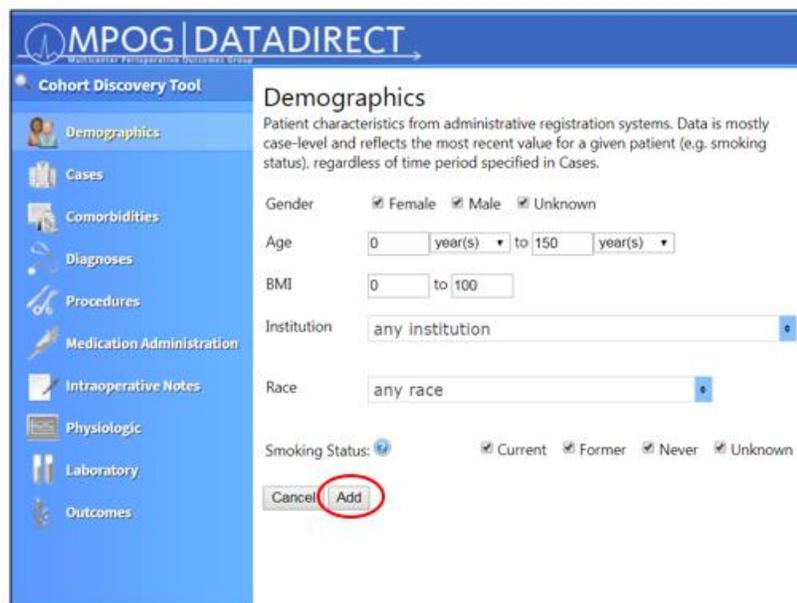

Next begin defining criteria for your query. Choose from the filters listed in the left panel, for example, select **Demographics**.

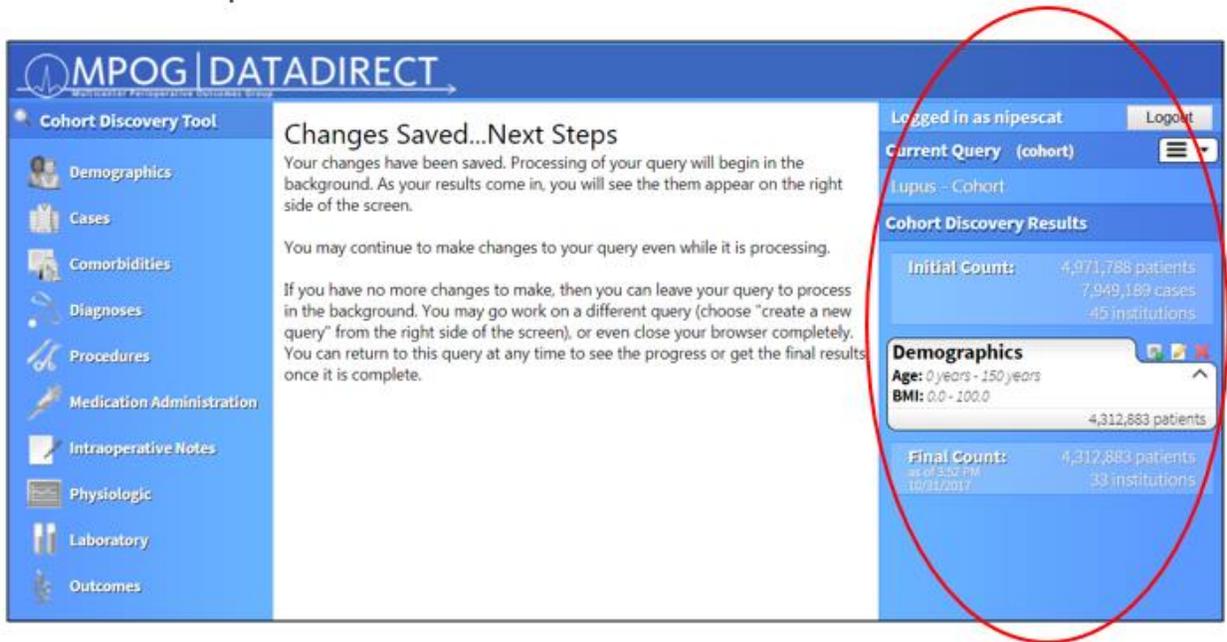

Demographics are *patient-level* characteristics available from the administrative registration systems (**not** case-level data, in other words, they do not change from one case to another).

Select the checkboxes beside the characteristics to *include* them in your query. De-select items you do **not** wish to include. For example, to find only Female patients, de-select Male and Unknown under Gender. *You can include any institution in cohort mode.

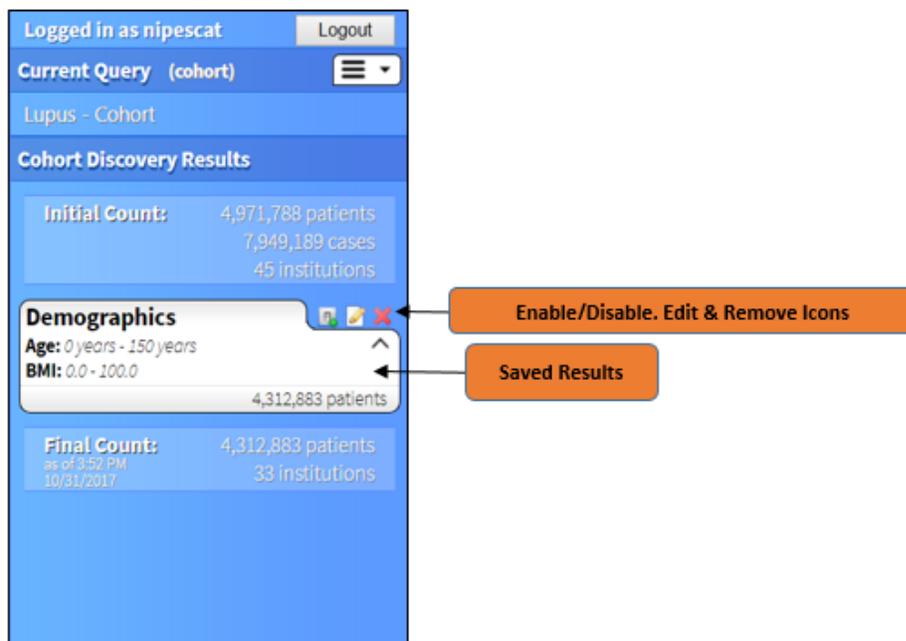

Click **Add** to *add* these criteria to your query.

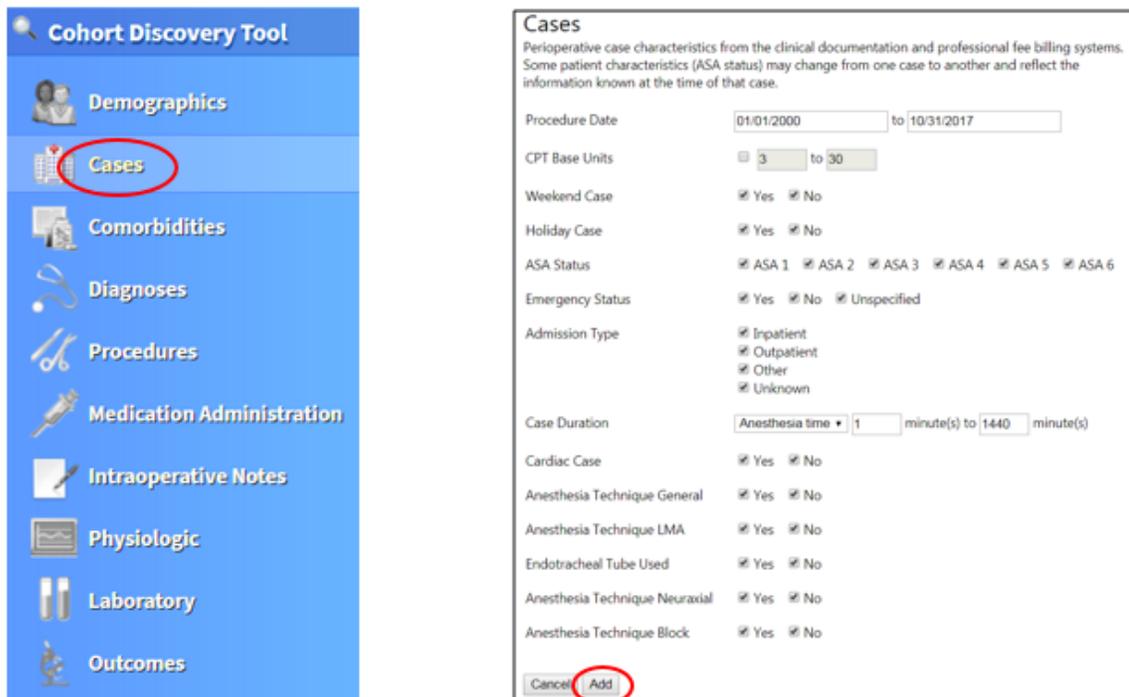

Cohort Results: As DataDirect retrieves data to match the selected criteria, the right panel of the screen will display final counts. Note: Your query is also saved to your individual profile in DataDirect.

Cohort Discovery Results include 1) *initial patient, case, and institution counts*, 2) *saved query criteria*, and 3) *final count of patient data matching your query*. As you build your query, check the right panel to verify that your criteria have been added. At any time, you may enable/disable, edit or remove an individual filter from your query.

Cases: To continue building your query, select an additional filter category, for example, **Cases**. Check boxes you wish to select per each field. Click “Add” to finalize.

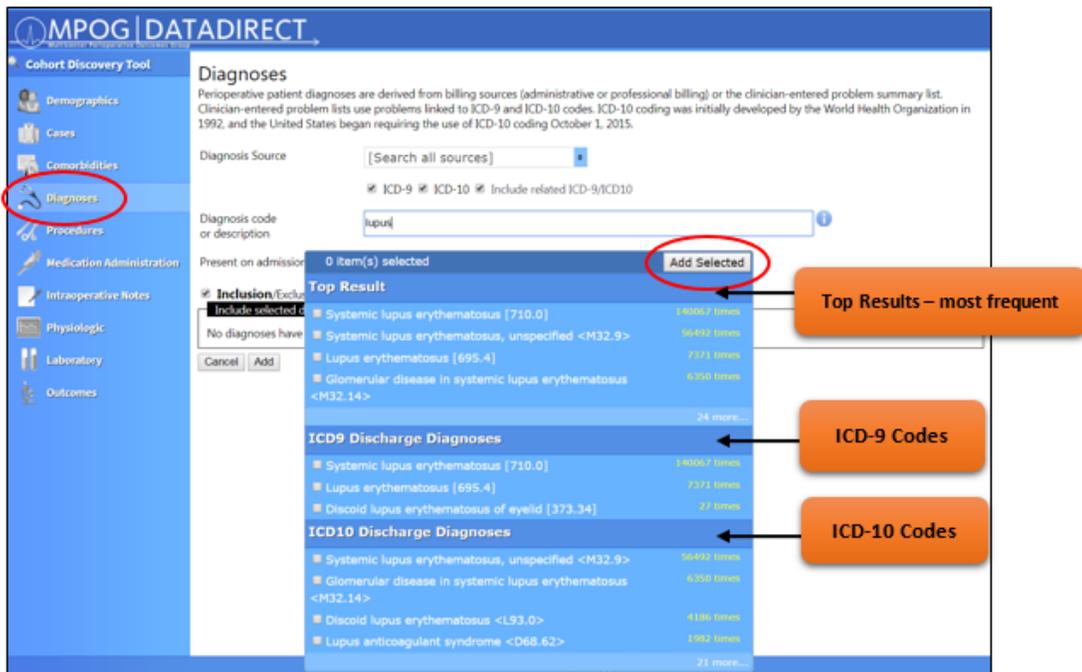

Review the updated result panel on the right side of the screen each time you click “Add” to note the additional criteria have been *saved* to your query. In this example, both Demographics and Cases criteria have been added to the query, and a final count has been generated:

Comorbidities: Next, Select **Comorbidities**, and continue to check the boxes of from the dropdown menu of comorbidities you want to include in your query.

Diagnoses: Begin typing the desired diagnosis name (or associated ICD-9 and ICD-10 codes) into the Diagnosis Code field. IDC-10 codes were required as of October 1, 2015, therefore historical data may not include ICD-10 codes. If you are interested in capturing diagnosis data for a case before that occurred before this date, please choose both ICD-9 and ICE-10 codes. Select the codes you desire, then click **“Add Selected”**.

As you select a diagnosis code, the ‘parent’ ICD-9 and ICD-10 codes and its associated ‘child’ ICD-9 and ICD-10 codes will be displayed and automatically **included**. De-select (click the red X) any individual code you wish to remove from the suggested list. “Inclusion” is the default selection. Click “Add” when finished.

Systemic lupus erythematosus

ICD-9

- [710.0] Systemic lupus erythematosus
- [710.1] Systemic sclerosis
- [710.2] Sicca syndrome
- [710.3] Dermatomyositis
- [710.4] Polymyositis
- [710.5] Eosinophilia myalgia syndrome
- [710.8] Other specified diffuse diseases of connective tissue
- [710.9] Unspecified diffuse connective tissue disease

ICD-10

- <M32.10> Systemic lupus erythematosus, organ or system involvement unspecified
- <M32.9> Systemic lupus erythematosus, unspecified
- <M34.0> Progressive systemic sclerosis
- <M34.1> CR(E)ST syndrome
- <M34.9> Systemic sclerosis, unspecified
- <M34.89> Other systemic sclerosis
- <M35.00> Sicca syndrome, unspecified
- <M35.01> Sicca syndrome with keratoconjunctivitis
- <M33.09> Juvenile dermatomyositis with other organ involvement
- <M33.10> Other dermatomyositis, organ involvement unspecified
- <M33.90> Dermatomyositis, unspecified, organ involvement unspecified
- <M33.00> Juvenile dermatomyositis, organ involvement unspecified
- <M36.0> Dermato(poly)myositis in neoplastic disease
- <M33.19> Other dermatomyositis with other organ involvement
- <M33.99> Dermatomyositis, unspecified with other organ involvement
- <M21.80> Other specified acquired deformities of unspecified limb
- <M33.20> Polymyositis, organ involvement unspecified
- <M33.29> Polymyositis with other organ involvement
- <M35.8> Other specified systemic involvement of connective tissue
- <M35.5> Multifocal fibrosclerosis
- <L87.1> Reactive perforating collagenosis
- <M35.1> Other overlap syndromes
- <M35.9> Systemic involvement of connective tissue, unspecified
- <M36.8> Systemic disorders of connective tissue in other diseases classified elsewhere

Cancel Add

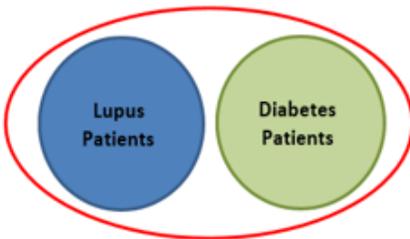

NOTE: To **Exclude** a characteristic in your query (e.g., run a query to retrieve patients who do NOT have Lupus), you must “UNCHECK” the Inclusion / Exclusion checkbox. When the box is **unchecked**, the indicator “Exclusion” appears in bold print.

Inclusion/**Exclusion**

Exclude selected diagnoses

Systemic lupus erythematosus X

Adding “OR” Logic: You may be interested in patients who have *either* one condition *or* a second condition. For example, if you were interested in patients with Lupus **OR** patients with Diabetes, use “OR” logic. To achieve this, include the Diabetes criteria in the “same criteria box” as the Lupus diagnoses. Open the existing Diagnoses query Lupus. Click the **Edit** icon  to edit the Diagnoses filter.

The TWO groups will be retrieved with “OR” logic.

Enter the second criteria, e.g., Diabetes. Select the desired code(s) by clicking **Add Selected**

Diagnoses
 Perioperative patient diagnoses are derived from billing sources (administrative or professional billing) or the clinician-entered problem summary list. Clinician-entered problem lists use problems linked to ICD-9 and ICD-10 codes. ICD-10 coding was initially developed by the World Health Organization in 1992, and the United States began requiring the use of ICD-10 coding October 1, 2015.

Diagnosis Source: [Search all sources]

ICD-9 ICD-10 Include related ICD-9/ICD10

Diagnosis code or description: diabetes

1 item(s) selected **Add Selected**

Top Result

- Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled [250.00] 1998017 times
 - Type 2 diabetes mellitus without complications <E11.9> 939400 times
 - Diabetes mellitus without mention of complication, type II or unspecified type, uncontrolled [250.02] 211274 times
 - Type 2 diabetes mellitus with hyperglycemia <E11.65> 209389 times

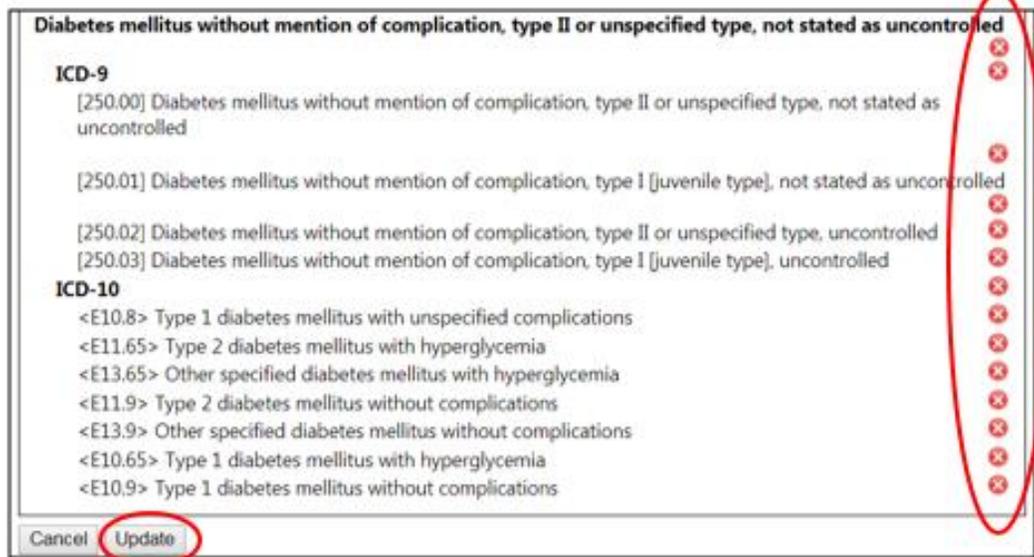

ICD9 Discharge Diagnoses

- Diabetes mellitus without mention of complication, type II or unspecified type, not stated as uncontrolled [250.00] 1998017 times
- Diabetes mellitus without mention of complication, type II or unspecified type, uncontrolled [250.02] 211274 times
- Diabetes with neurological manifestations, type II or unspecified type, not stated as uncontrolled [250.60] 186168 times
- Polyneuropathy in diabetes [357.2] 167840 times

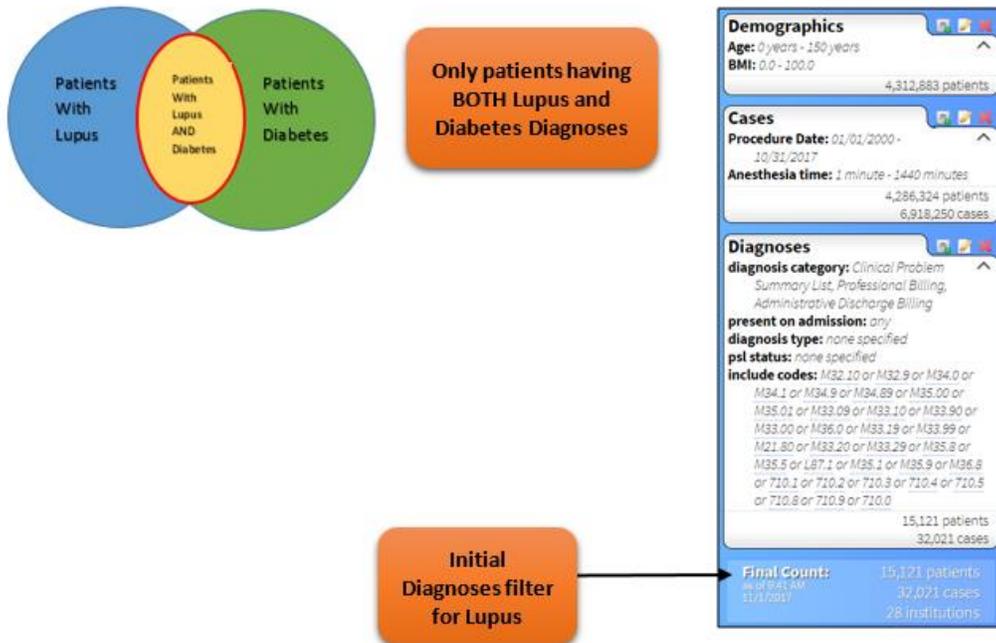

ICD10 Discharge Diagnoses

- Type 2 diabetes mellitus without complications <E11.9> 939400 times

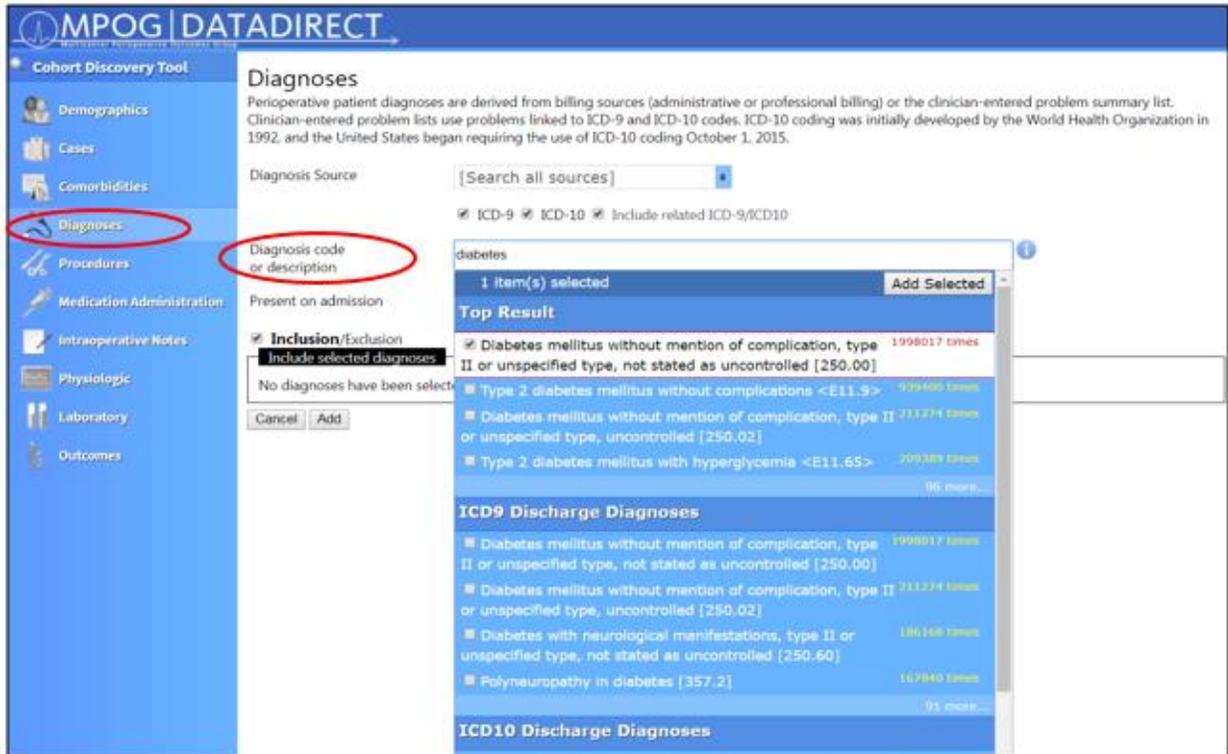

Remove any “child” ICD-9 and ICD-10 codes that you do not wish to keep (by clicking the red X for each). Click **Update** (both conditions will be listed).

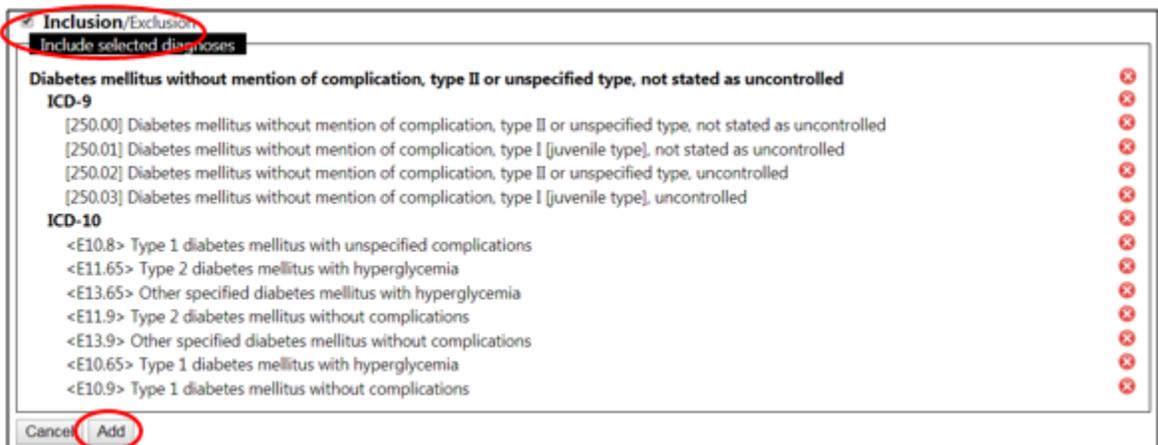

Adding “AND” Logic: In contrast, if you are interested in patients who have BOTH Lupus AND Diabetes diagnoses, use “AND” logic. To find these patients, build two separate filters (i.e. one for Lupus, and a separate one for Diabetes). Start with an initial Diagnosis filter including Lupus.

Build an additional Data Source (Diagnosis) by *returning* to the main filter list. Click **Diagnoses**, enter Diabetes into the Diagnosis code field, and click **Add Selected** to create new, separate criteria.

After specifying the details (refining your ICD-9 and ICD-10 codes if desired), click **Add**. Each time you click **Add**, you are adding a new criteria panel (i.e. an 'AND' statement to the query).

The additional required criteria appear as a separate criteria box in the right hand panel, and the narrowed query results show a far more limited population of patients – only those patients who possess BOTH of the listed diagnosis codes.

Diagnoses
 diagnosis category: Clinical Problem
 Summary List, Professional Billing,
 Administrative Discharge Billing
 present on admission: any
 diagnosis type: none specified
 psl status: none specified

Retrieve all patients who
 are 0-150 years old with
 BMI 0-100.

AND have cases with
 dates of service between
 1/1/2000 – 10/31/2107

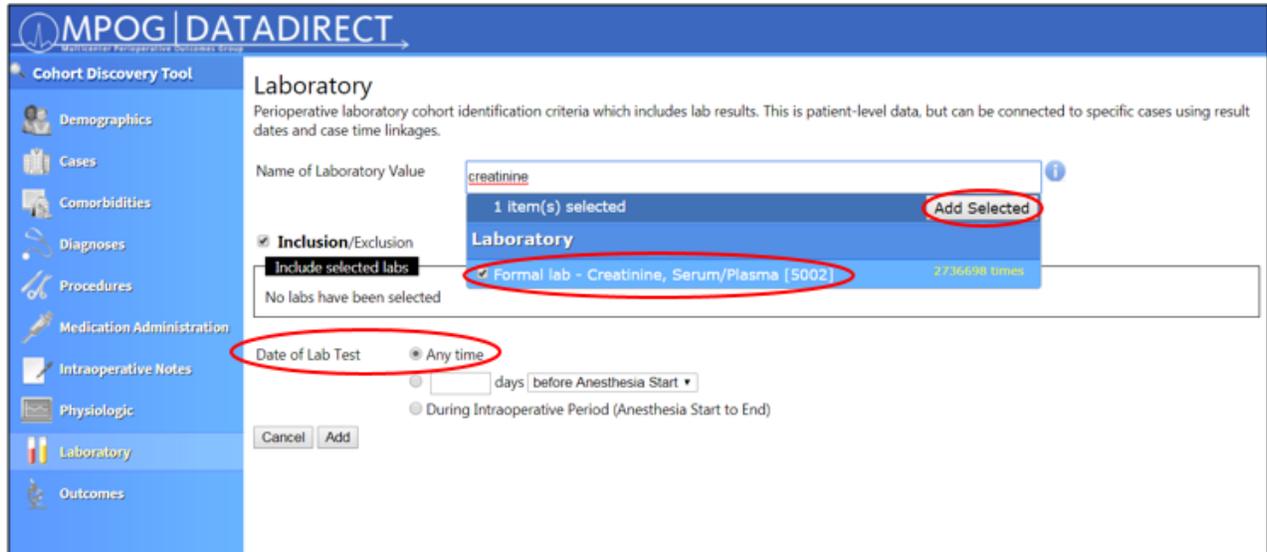

AND have Lupus

AND have Diabetes

In addition to the Procedures, Medication Administration, Intraoperative Notes, and Laboratory filters, you may select **Physiologic** data.

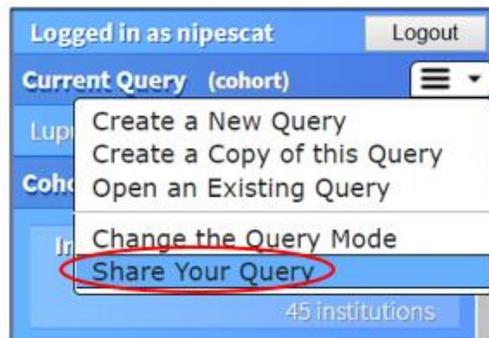

Continue to build and refine your query using Data Sources on the left-hand panel. Refer to the instructions inside each filter panel to determine the source and details for the information available.

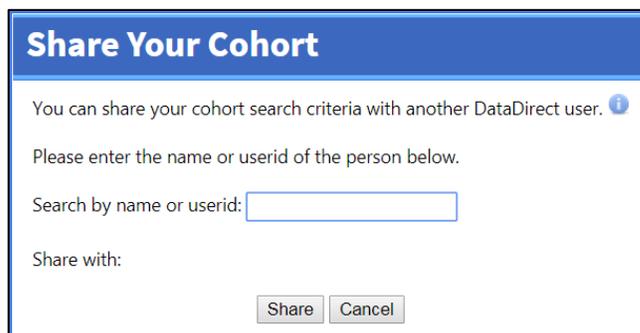

Share Your Query

Users have the ability to share queries that create. For example, researchers may explore ideas in DataDirect to identify a viable research topic and then share their query to the Coordinating Center programmer assigned to their PCRC project to have them run the query on the database before submitting to the PCRC committee. For Quality Improvement, a QI champion may generate a query that they share with their administration. An ACQR may want to share a query to track a certain subset of patients before or after QI project implementation

To share your query, select the dropdown menu icon  and select **Share Your Query**.

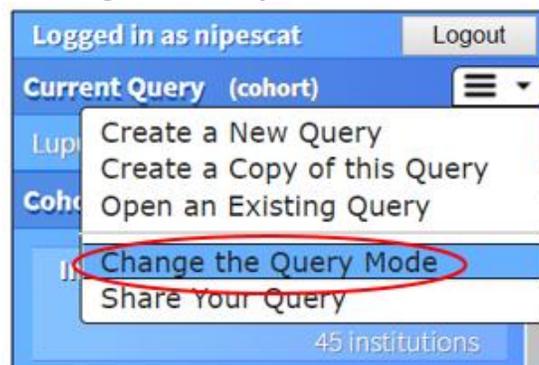

Enter the name or UserId of the DataDirect user you wish to share your query with, and click **Share**.

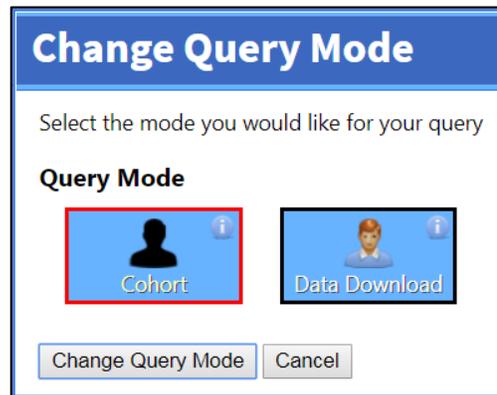

A screenshot of the "Share Your Cohort" dialog box. The title bar says "Share Your Cohort". Below the title bar, there is a message: "You can share your cohort search criteria with another DataDirect user." followed by an information icon. Below that, it says "Please enter the name or userid of the person below." There is a text input field labeled "Search by name or userid:". Below the input field, it says "Share with:". At the bottom of the dialog, there are two buttons: "Share" and "Cancel".

Toggling Between Query Modes

To switch from Cohort Mode to Data Download Mode (or vice versa), click on the dropdown menu icon  and select **Change the Query Mode**.

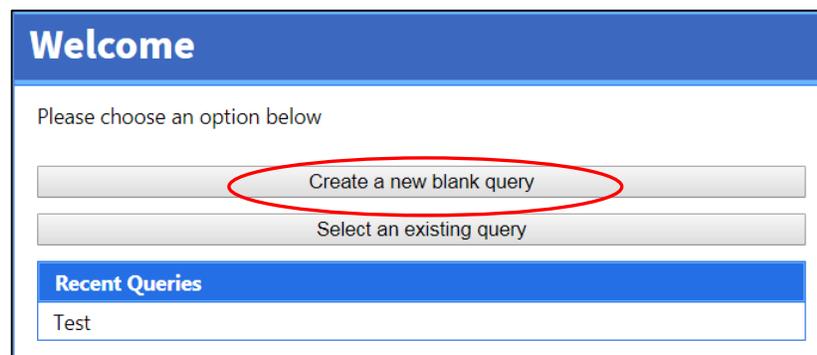

Select the desired mode for your query, then click **Change the Query Mode**.

The dialog box has a blue header with the text "Change Query Mode". Below the header, it says "Select the mode you would like for your query". Under the heading "Query Mode", there are two buttons: "Cohort" (with a silhouette icon) and "Data Download" (with a person icon). The "Cohort" button is highlighted with a red border. At the bottom, there are two buttons: "Change Query Mode" and "Cancel".

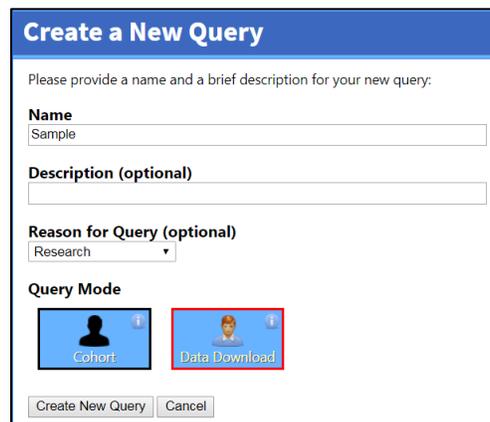

Data Download Mode

Creating a New Query: After logging in, select **Create a new blank query** to proceed (or **Select an existing query** to use a previously created query). Note: In data download mode, you are ONLY able to download cases from your site.

The "Welcome" screen has a blue header with the text "Welcome". Below the header, it says "Please choose an option below". There are two buttons: "Create a new blank query" and "Select an existing query". The "Create a new blank query" button is circled in red. Below the buttons is a section titled "Recent Queries" with a table containing one entry: "Test".

Enter a name, description, and reason for your query and select Data Download, then click **Create New Query**. You may also download an existing Cohort query by editing your query and toggling the Query Mode to Data Download.

The form has a blue header with the text "Create a New Query". Below the header, it says "Please provide a name and a brief description for your new query:". There are three input fields: "Name" (with the text "Sample"), "Description (optional)", and "Reason for Query (optional)" (with a dropdown menu showing "Research"). Below the input fields is the "Query Mode" section with two buttons: "Cohort" (with a silhouette icon) and "Data Download" (with a person icon). The "Data Download" button is highlighted with a red border. At the bottom, there are two buttons: "Create New Query" and "Cancel".

Continue to add criteria from the left panel to your query as you would in Cohort mode.

To select the data elements, you want included in your dataset, click on **Individual Data** under the Output View Selection.

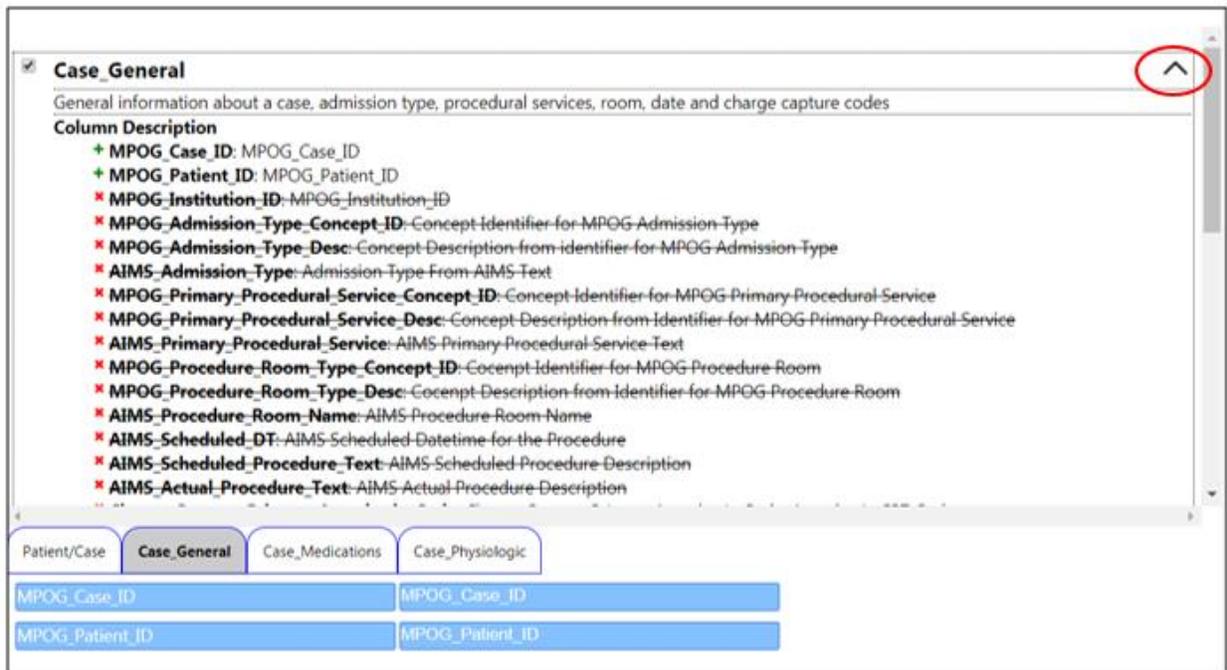

In this section, you may select individual data elements that describe the *patient* or *case overall*. Begin typing the name of the item, and check the appropriate boxes to save these data elements.

Select the **Case_General** tab or click on **Groups** under the Output View Selection section to choose case specific data elements such as admission type and procedural services. Check the box next to **Case_General** to begin selecting the items you desire.

Click on the arrow to view the items associated with general case information. The green plus sign signifies that the item will be included. The red X items display in “strike-through” to indicate that they will NOT be included.

Click on the red X to change the symbol to a green plus sign

These elements are included.

- MPOG_Case_ID: MPOG_Case_ID
- MPOG_Patient_ID: MPOG_Patient_ID
- MPOG_Institution_ID: MPOG_Institution_ID
- MPOG_Admission_Type_Concept_ID: Concept Identifier for MPOG Admission Type
- MPOG_Admission_Type_Desc: Concept Description from Identifier for MPOG Admission Type
- AIMS_Admission_Type: Admission Type From AIMS Test
- MPOG_Primary_Procedural_Service_Concept_ID: Concept Identifier for MPOG Primary Procedural Service
- MPOG_Primary_Procedural_Service_Desc: Concept Description from Identifier for MPOG Primary Procedural Service
- AIMS_Primary_Procedural_Service: AIMS Primary Procedural Service Text
- MPOG_Procedure_Room_Type_Concept_ID: Concept Identifier for MPOG Procedure Room
- MPOG_Procedure_Room_Type_Desc: Concept Description from Identifier for MPOG Procedure Room
- AIMS_Procedure_Room_Name: AIMS Procedure Room Name
- AIMS_Scheduled_DT: AIMS Scheduled Datetime for the Procedure
- AIMS_Scheduled_Procedure_Text: AIMS Scheduled Procedure Description
- AIMS_Actual_Procedure_Text: AIMS Actual Procedure Description

There elements are NOT included.

- MPOG_Procedure_Room_Type_Concept_ID
